

REAL-TIME PROGRAMMING WITH BEAGLEBONE PRUS

beagleboard.org

Jason Kridner, jkridner@beagleboard.org

Home info link

- http://elinux.org/Ti_AM33XX_PRUSSv2

What are PRUs

- “Programmable Real-time Units”
- 32-bit RISC processors at 200MHz with single-cycle pin access for hard real-time
- Optimized for packet processing/switching and software implementations of peripherals
- Part of the PRU-ICSS, “Industrial Communications SubSystem”

Why and when to use PRUs

- Free from running on an operating system, so can be dedicated to a function
- Real-time because it can't be interrupted from its given task by other tasks
 - ▣ Interrupts are simply registered into an event register
 - ▣ Operations scheduled in an event loop
- Low, low, low latency from input to output
 - ▣ Zero-depth pipeline
- You can't interface an external MCU to DDR memory so fast!

Examples usage

- Tight control loops
 - ▣ Driving motors in a mobile robot, CNC machine or 3D printer
- Custom protocols
 - ▣ WS28x LEDs, DMX512, ...
 - ▣ EtherCAT, ProfiBUS, ProfiNET, ...
- Soft peripherals
 - ▣ PWM, UART (LEGO), ...

Example projects (see wiki page)

- 6502 memory slave
- DMX512
- WS28xx LEDs (OLA, LEDscape)
- MachineKit (Madison, WI – June 28!!)
- GSoC: pruspeak, BeagleLogic
- GCC, Forth, ...

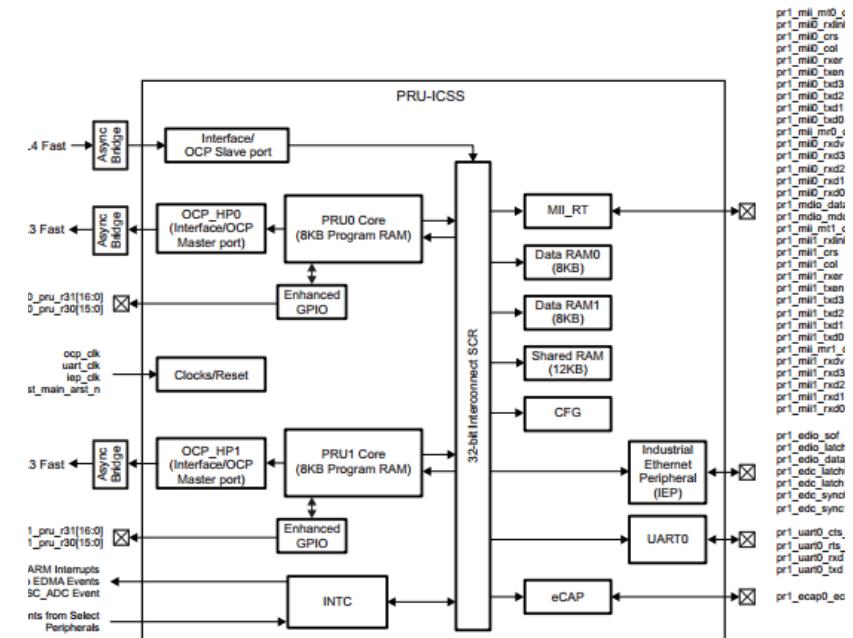

Why isn't it more popular

- Like lots of amazing things, started as something very focused --- you can't keep a good thing down
- Tools still being developed
 - ▣ C compiler
 - ▣ Linux drivers
- Libraries

PRUSS architecture details

- 2 cores at 200MHz each
- Memory
 - 8kB program each
 - 8kB data each
 - 12kB data shared
 - Access through L3 to external memory and peripherals

Figure 2. PRU-ICSS Integration

Extra peripherals in subsystem

- Shift serial capture/send
- Parallel capture/send

25 PRU low-latency I/Os

| PRU1_3 | 45 | 46 |
| PRU1_1 | | |

Accessing the other peripherals

- Yes, you can!
- The “L3” bus is exposed, so you can directly poke all of the peripheral registers
- Be careful! --- be sure the main CPU isn’t trying to access them at the same time, so you need to manually disable access to them on the main CPU

PRU Linux drivers

- uio_pruss – upstream
 - ▣ Memory mapped PRU control registers from userspace
 - ▣ Interfaces entirely in userspace library
- Various remote_proc implementations
 - ▣ “Proper” Linux abstraction of a processor
 - ▣ Lots of different “standard” interfaces

Why is Linux so painful

- Linux wants to abstract the hardware
- Is it really future-proof?
- Who is controls?

PRU tools – a work in progress

- TI C compiler
- Forth
- GCC
- pruspeak and remote_proc
- StarterWare (really?? Yes.)

PRU pin muxing

- Devicetree Overlays
- cape-universal

Questions!

- [http://elinux.org/Ti AM33XX PRUSSv2](http://elinux.org/Ti_AM33XX_PRUSSv2)
- jkridner@beagleboard.org (but, I don't answer questions if beagleboard@googlegroups.com isn't in copy)
- Follow @jadon and @beagleboardorg

What does your robot need to do?

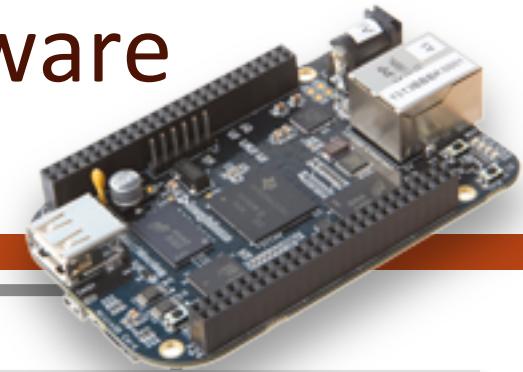

Basics (Microcontroller-like)

- Analog sensors
 - Range finders, controls
- Digital/serial sensors
 - Collision, controls
 - Motion, orientation
 - Wheel rotation
- Motors
 - Servo, DC, stepper

Extras (Computer-like)

- Networking
 - Web controls
 - Streaming data
 - Social media
- Heaving processing
 - Vision
- High level languages
 - Python, JavaScript, Ruby, ...

BeagleBone Black: Open hardware computer for makers

Truly flexible open hardware and software development platform

All you need is in the box

Proven ecosystem from prototype to product

Most affordable and proven open hardware Linux platform available

 **beagleboard.org**

BeagleBone Black

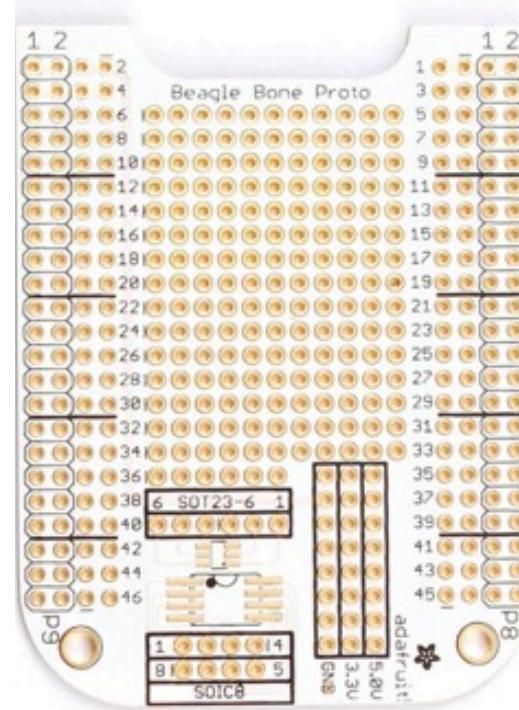

- Ready to use: \$45
- 1 GHz performance
- On-board HDMI to connect directly to TVs and monitors
- More and faster memory now with 512MB DDR3
- On-board flash storage frees up the microSD card slot
- Support for existing Cape plug-in boards

BeagleBone Capes

<http://beaglebonecapes.com>

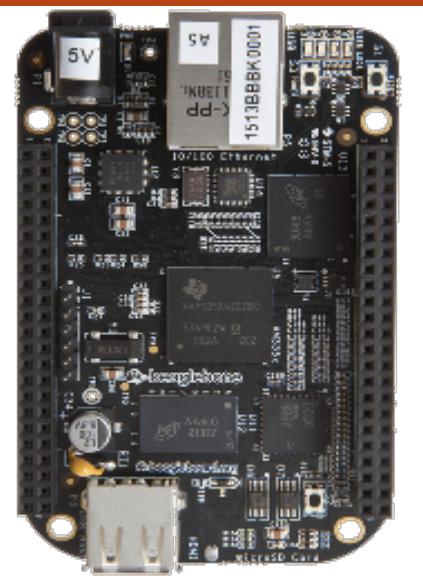

- Just another word for a daughterboard
- Many have a cape-like formfactor
- Up to 4 stacked, depending on resources used

Tigal Mikrobus Cape and Click Boards

- “One Cape to Rule them All”
- Four Adaptable Capes in One
- Over 70 Click Boards Available and Counting

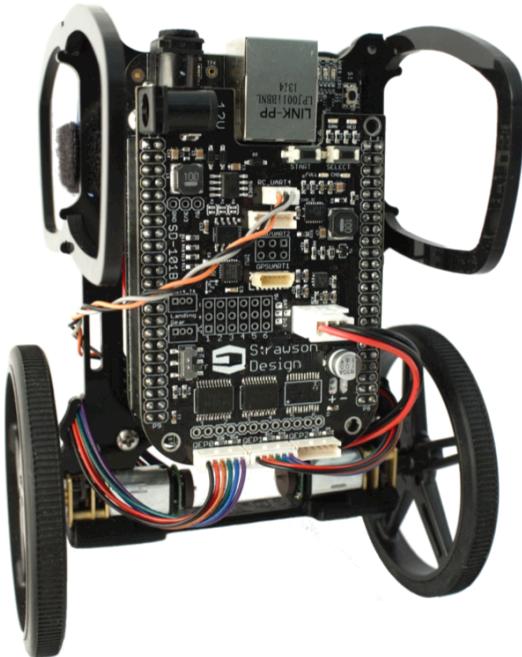

OpenROV

- Open-source underwater robot
- Community creating more accessible, affordable and awesome tools for underwater exploration
- Started by people wanting to explore an underwater cave
- Successfully Kickstarter'd

BeagleMIP

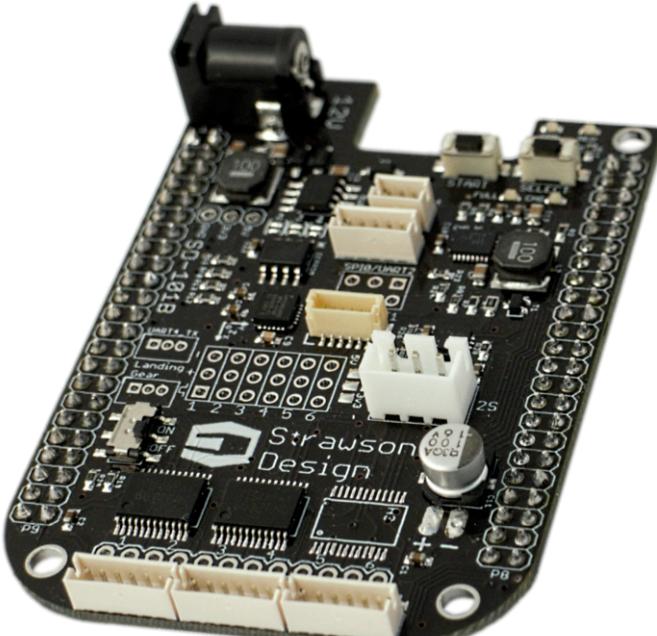

- Self-Balancing robot powered by the BeagleBone Black and the Novus Robotics Cape
- Hackable Open Source Robotics Platform for Fun and Education
- Developed at the University of California, San Diego to Teach Advanced Digital Control Systems

BeagleQuad

The new ***Novus Robotics Cape***
sends your ***BeagleBone Black***
projects to the sky!

Novus Robotics Cape

- Bringing the power of the BeagleBone Black to your robotics project has never been easier.
- 2S LiPo Charger and Balancer
- 9-Axis IMU
- Drive 6 DC Motors
- Plug and Play Connections for
 - GPS
 - I2C
 - UART
 - Hobby Servos
 - Brushless ESCs
 - Spektrum RC Radio
- Open Source Libraries, Sample Code, and detailed documentation.

Georgia Tech course on mobile robots

- <http://o-botics.org/>
 - ▣ A place where roboticists can collaborate on robot designs, code, electronics, and hardware
- Build a robot from scratch using components from Sparkfun
- Learn about mobile robotics theory

Why is BeagleBone perfect for bots?

- Lots of I/Os (65 digital, 7 analog inputs, 8 PWMs...)
- PRUs (2 32-bit RISC microcontrollers)
- Fast (1GHz) super-scalar armv7a processor
- Linux makes networking easy
- Ready to use out-of-the-box

Whats and whys on languages

- C/C++/Sketches
- Go
- Java
- Ruby
- Erlang
- Forth
- Lisp
- Perl
- Python
- JavaScript
- Scratch
- Blockly
- LabView / Simulink
- Etoys

Javascript and Python libraries

JavaScript

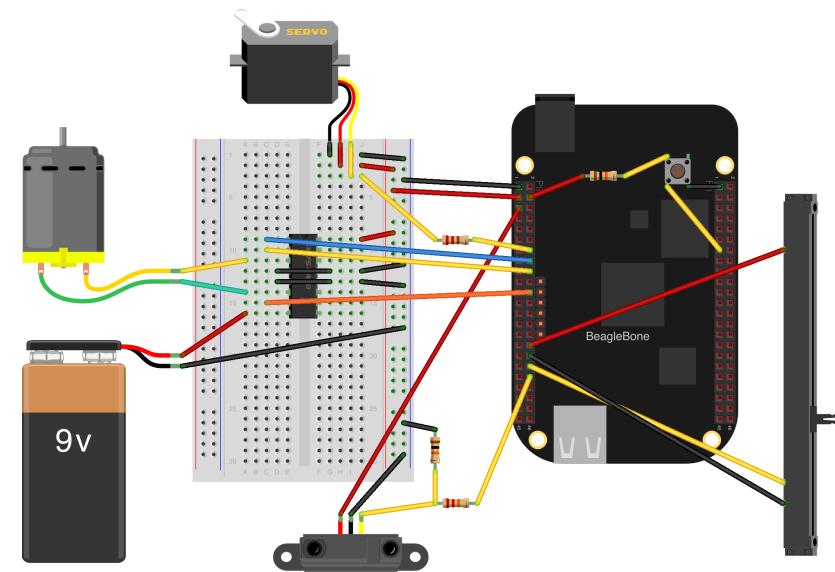

- BoneScript
- Johnny Five
- Cylon.js
- Node-RED
- BotSpeak

Python

- Adafruit_BBIO
- PyBBIO
- OpenCV

Some basic robotic components

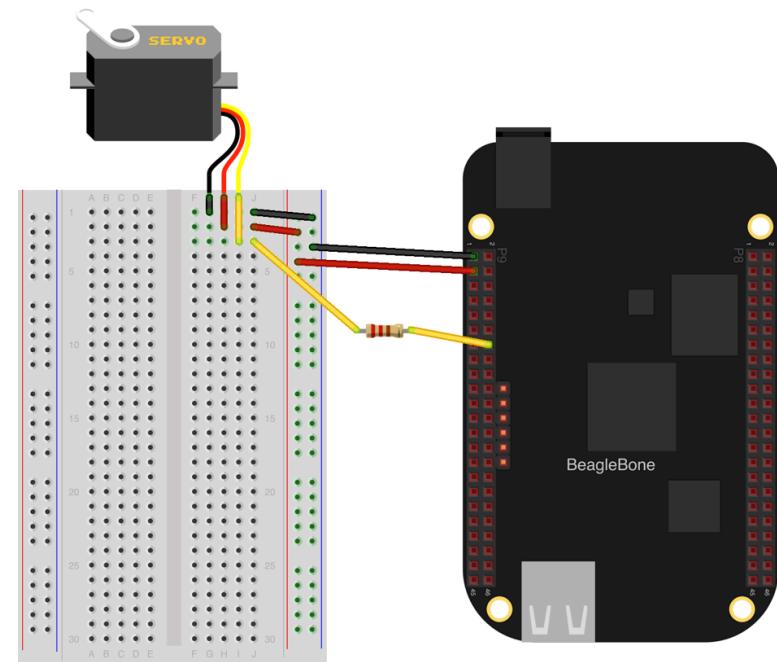

- Analog sensors
 - ▣ IR range finder
 - ▣ Potentiometer
- Digital sensor
 - ▣ Button
- Servo and DC motors

Made with Fritzing.org

Wiring up a servo motor

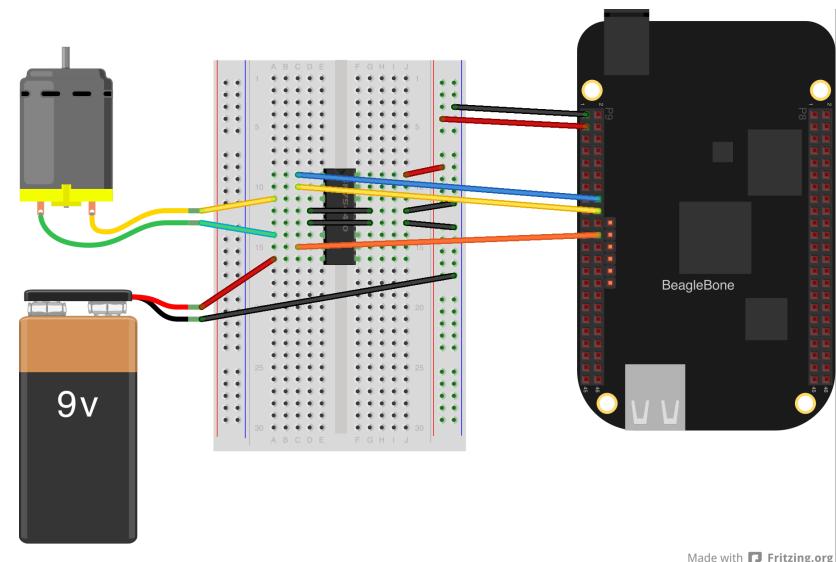

- Needs power and ground
- Connect to a PWM capable pin
- Resistor to protect the output pin

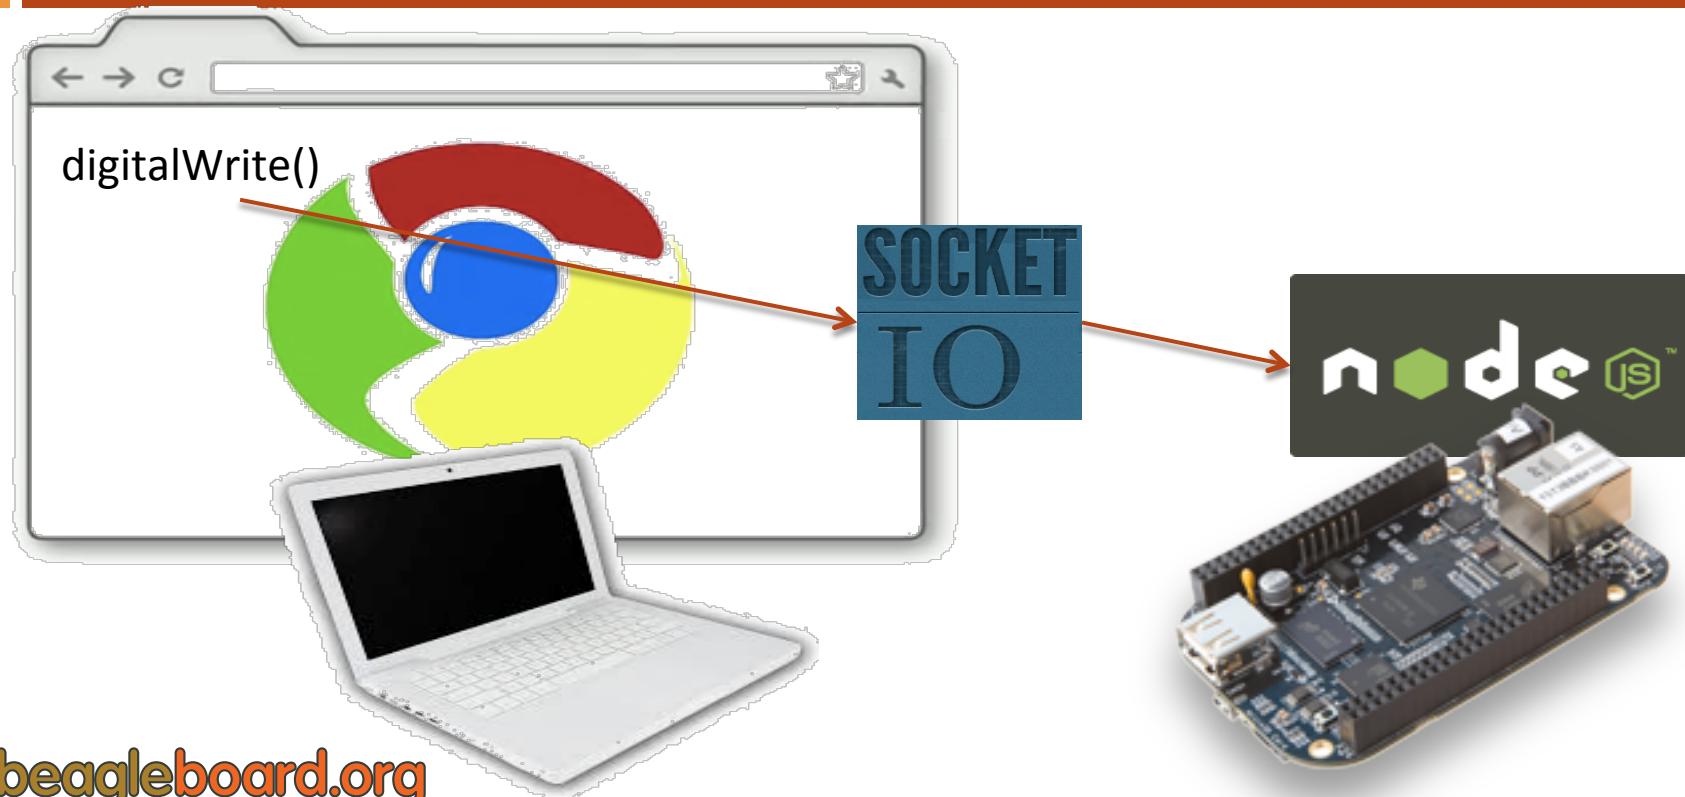

Made with Fritzing.org

Wiring up a DC motor

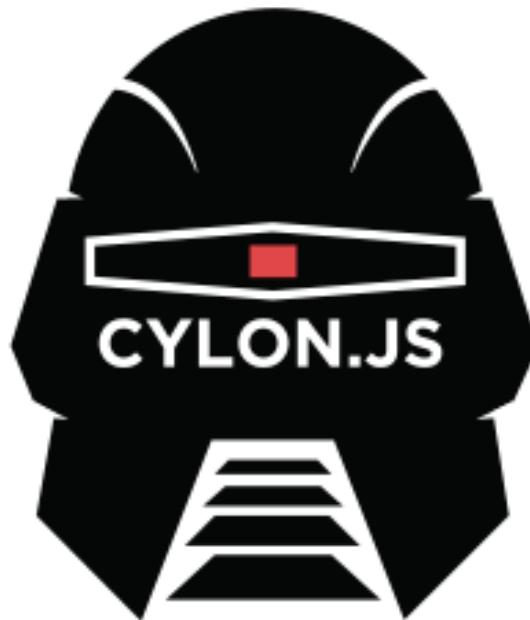

- Use a transistor or H-bridge to provide enough power
- Use a PWM to be able to adjust
- Extra GPIOs to set direction

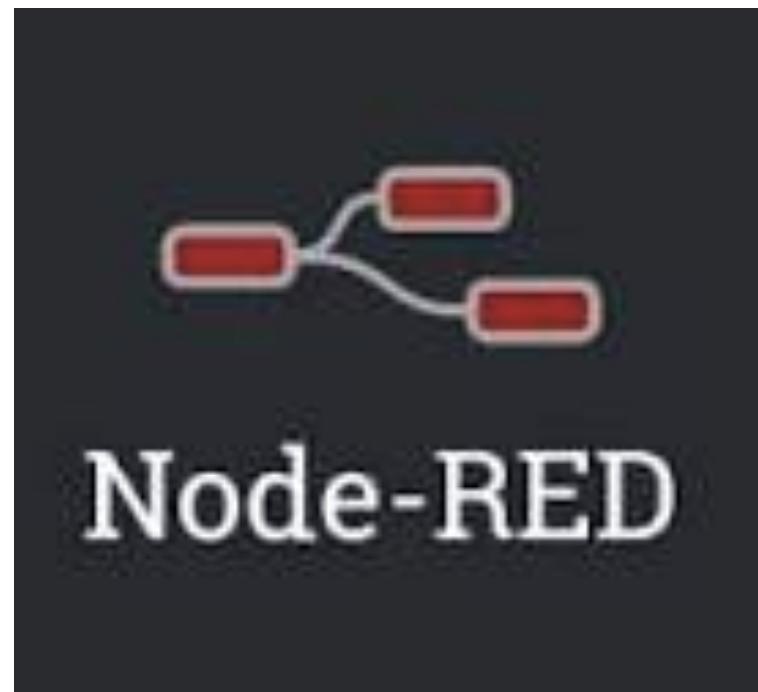

BoneScript in the browser

Cylon.js

Node-RED

Upcoming libraries

- BotSpeak for PRU
- BeaglePilot

Some BeagleBone books
